

CIPSA/PI Indirect Category Indexes and Benchmarking Reports

Procurement function and processes

- PI undertakes confidential benchmarking of the procurement function and processes of organisations against value for money criteria. Participants gain over 60 individual perspectives on how their procurement function can achieve better value for money.
- The function and processes used can be linked to performance in category management of commonly purchased categories-see CIPSA/PI list attached.
- One area examined is an analysis of a participant's procurement department workload compared to peer organisations. The graph below lists one peer group's top work elements.

Analysis of Procurement Department workload by % of staff time
